

StorePoint_Presetup_3.0.EN- MAT vX

den 11 mars 2016

16:54

Module description:

Pre-configures Storepoint BOS 2.5, Storepoint BOS Client 2.5 and Storepoint POS 2.5 for silent setup. Add storepoint support user access permissions.

On BOS it will also:

- configure the BOS FTP sites for SOSIF and SAREC access
- wait for PriceBook to be added from SOSIF (optional)
- fetch required POS aliases from all client objects in IMU for POS pre-configuration on BOS
- adds remote desktop user

Test environment:

Host:

- dtpset24-NT4003.ikeadt.com
- DTPSET13-WS0001.ikeadt.com
- dtpset13-if0003.ikeadt.com

Account:

User: spadmin1

Dependencies (hard):

The following aliases are required

REG_GeoID must be in place.

If the machine is -NT4 then the following aliases are also required

FTPSiteName_1 must be in place.

WWWRoot must be in place.

FTPSiteEnableAnonymousAuthetication_1 must be set to True.

FTPSiteEnableBasicAuthentication_1 must be set to False.

FTPSiteHostHeader_1 must be set to *

FTPSiteIP_1 must be set to IPAddress1

FTPSiteProtocol_1 must be set to ftp

FTPSiteSslBehaviour_1 must be set to Allow

FTPSiteTcpPort_1 must be set to 21

FTPSitePhysPath_1 must be set

If the machine is -IF then the following aliases are also required

POS_STP_ServerName must be set

If the machine is -DN|-NB|-DW|-WS|-HM|-NT1

POS_STP_ServerName must be set

Set the priority to 8010 as the module needs to be run after the FTP module (priority 8005).

Set a WMI module dependencies to the SRV_2008R2_FTP_1.0.EN module if the machine is an -NT4 type.

Binaries/Components:

- Setup_FTP_Config.exe v2,0,0,4
- Setup_Presetup.exe v3.0.0.11
- Storepoint_Delegate.exe v3,0,0,21
- Storepoint_FTP_Config.exe v2,0,1,58
- Storepoint_Presetup.exe v2,0,0,145

Destination path:

%programfiles%\Storepoint_Presetup

On x64 machines, if reg key

HKLM\SOFTWARE\Wow6432Node\StorePoint\

doesn't exist remove registry subkeys

HKLM\SOFTWARE\Wow6432Node\Positive\VersionControl

HKLM\SOFTWARE\Wow6432Node\RetalixInstallShield

On x86 machines, if reg key

HKLM\SOFTWARE\StorePoint\

doesn't exist remove registry subkey

HKLM\SOFTWARE\Positive\VersionControl

HKLM\SOFTWARE\RetalixInstallShield

Non-functional tests with result:

Clean install with dependencies - Ok

Patch install – N/A (only applies for patches)

Uninstall module - Ok

Reinstall - Ok

Rolled Upgrade - Ok

Roll back - Ok

Windows 7 reparse compliancy – N/A

- Virtual File Store in %localappdata% not used
- Virtual Registry Store in HKCU\Software\Classes not used

Non-functional issues found:

Severity: 1 (High) - Must be fixed, 2 (Medium) - Fix recommended, 3 (Low) - No action needed

<what issues was found, did any manual mitigation solve the issue>

Recommendation:

Based on the tests performed and the severity level of any issues found, the testers recommend deployment.

Tester:
